STEROWNIK POLOWY

ZABEZPIECZENIE RÓŻNICOWO - PRĄDOWE LINII

We create ideas with power!

The family of the e²TANGO-2000-series HV protections has been developed by our R&D team consisting of engineers with extensive practical knowledge and many years of experience in the industry. The idea behind creating a high-voltage protection automation platform was to provide clients with operational surety of hardware, software, and algorithms.

The e²TANGO-50, e²TANGO-100, e²TANGO-200, e²TANGO-400, e²TANGO-600, e²TANGO-800, e²TANGO-1000, e²TANGO-1200 protections and bay controllers for MV have been installed in thousands of facilities across the country and Europe. The hardware platform is based on the same central unit as for the e²TANGO series, of course, with the same configuration of processors, memory cards, inputs/outputs, etc. This makes us absolutely convinced that a few years of trouble-free operation of the e²TANGO series hardware gives security for applications in sensitive areas of HV stations and switchgears.

The e²TANGO-2000 software was developed on the basis of proven versions for MV controllers, while the algorithms of protections operation were developed in cooperation with the Institute of Power Engineering in Warsaw. Thanks to this, the user can be sure that the applied solutions have been tested over the last few decades and work reliably in many HV facilities in Poland and Europe.

The safety of the HV protections' users and operated power facilities was our priority when creating e²TANGO-2000. Therefore, in addition to the certainty of the hardware and software side, we have performed a full type testing completed with a certificate confirming the workmanship quality of the HV protections series.

Dariusz Rybak

Chief Designer of the e²TANGO series
Elektrometal Energetyka SA

APPLICATION OF HV PROTECTIONS

The e²TANGO HV protections portfolio constitutes a wide range of protection automation devices, including overcurrent and earth-fault protections, differential protection of transformer, voltage regulator, and line residual current protection. The e²TANGO-2000 protection units can be used in bays with the various intended use and operating nature, e.g., in HV line bays or HV/MV transformer bays, but also in facilities of distribution, industrial and other power engineering, which have high-voltage (HV) stations.

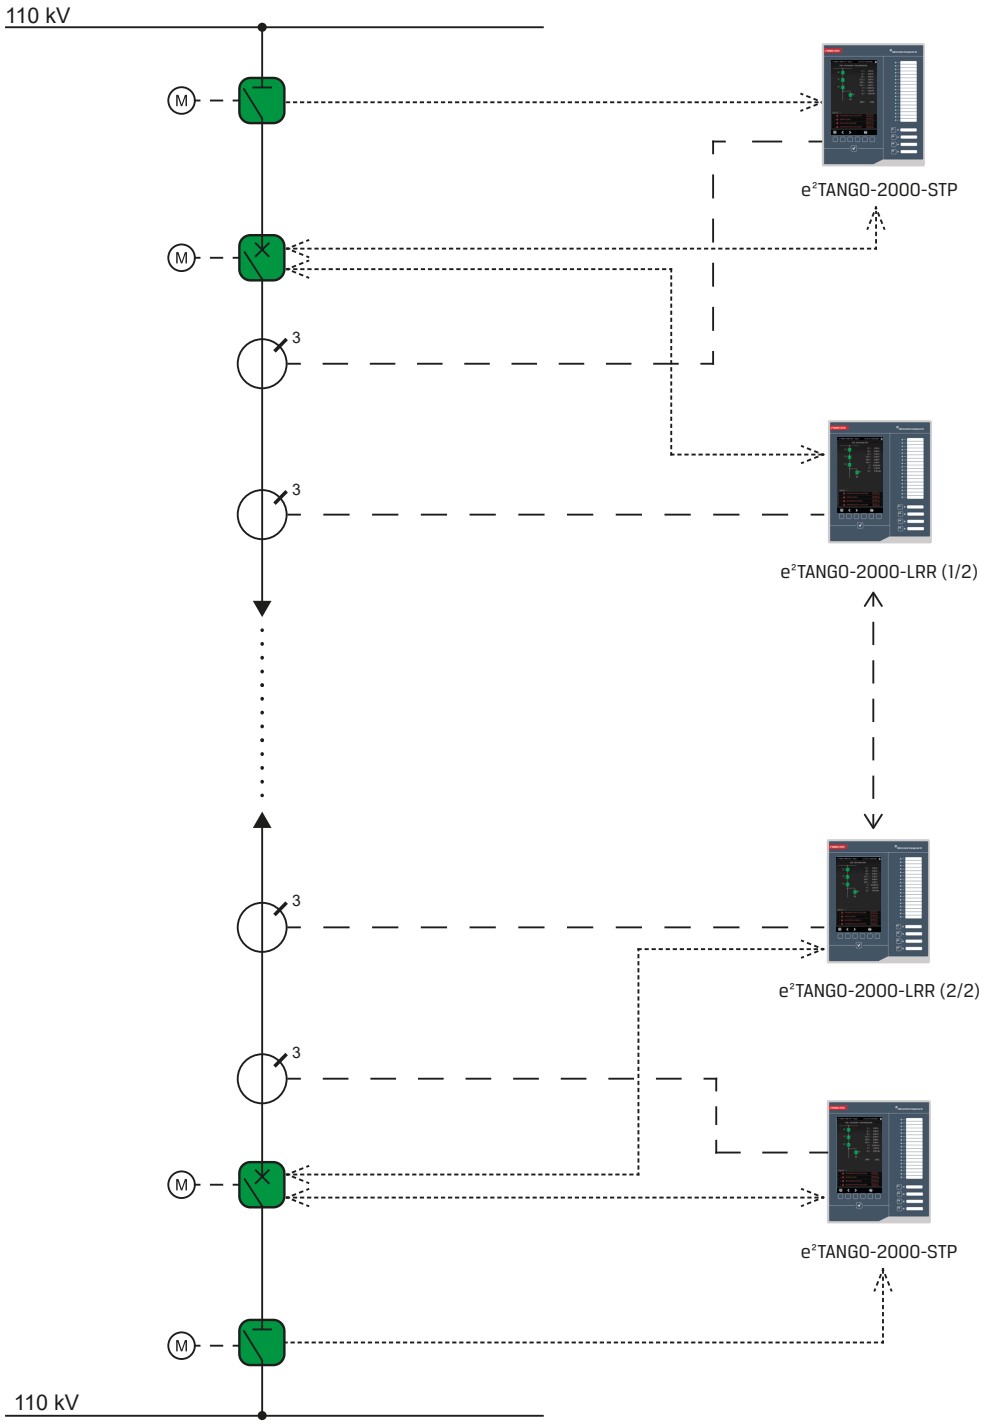
HV LINE BAY DIAGRAM

A diagram of HV line bays with marked places for installing the e²TANGO-2000-type protection automation is presented below.



A comprehensive solution for the HV line bay, which includes all protection automation elements based on the e²TANGO platform, is demonstrated. The bay controller (STP) and line residual current protection (LRR) have been constructed based on the e²TANGO-2000.

ADVANTAGES OF HV PROTECTIONS

remote service access

remote and local readout of diagnostic data with the possibility of sending it to the manufacturer's service

tested algorithms

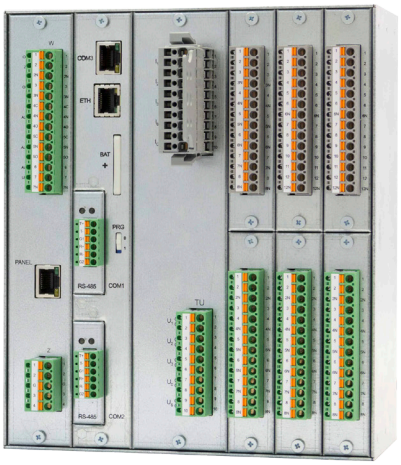
protection algorithms developed in cooperation with the Institute of Power Engineering

spinning reserve

restoring the bay to work after a failure within several minutes, possibility to restore all bay data, e.g.: settings, logic, events

verified hardware base

basing on proven hardware and software of e²TANGO MV controllers



intuitive interface

legible menu layout, pictorialness of captions and markings

high interference resistance

up to 100% higher than required by the standard

wide range of hardware configurations

6-, 10-, 14-slot units are available with surface, flush or mixed installation method

expansion cards diversity

modular design based on expansion and communication cards, up to 168 inputs and up to 39 outputs

Intuitive and easy-to-use e²TANGO HV protection units are equipped with a fully configurable, clear screen and extensive configuration, registration, and measurement functions. The legibility of indications and signalling, easy access to documentation and instructions, easy verification of logic operation, and graphical verification of protections characteristics or remote service access definitely improve daily work with the device.

DESIGN

The e²TANGO-series HV protections consist of two elements: operator panel and central unit. The central unit is made based on expansion cards and comes in three housing versions: J6 (6 cards), J10 (10 cards) and J14 (14 cards) - depending on the complexity of the switchboard bay layout and user's needs. The e²TANGO-2000 operator panel has a 7-inch, high-resolution colour screen.

signal LEDs
18 three-colour LEDs

replaceable labels
easily accessible and replaceable diode and function buttons' captions

context buttons
enable immediate operation of switches' statuses and device menu navigation

function keys with LEDs
allow for assigning them most frequently used functions

USB communication
USB and USB mini ports

PROTECTION FUNCTIONS

50/50N	short-circuit/instantaneous earth-fault
51/51N	overcurrent/three-stage zero overcurrent delayed
50HS	shortening of the tripping time in case of activation on short-circuit
51	dependent overload (IEC characteristics or approximated in item 6)
60/67N	overcurrent/zero, directional overcurrent
59N	zero-component overvoltage
51VN	zero overcurrent with voltage monitoring/voltage interlock
59	two-stage overvoltage (operation selection from phase or line-to-line voltages)
27	two-stage undervoltage (with operation selection from phase or line-to-line voltages)
87L	line differential protection
74TCS	control of 3 control circuits

AUTOMATION

- PDZ automation
- SCO automation
- SPZ treble automation with breaker position control and the possibility to determine the type of protection that initiates the triggering of SPZ
- LRW automation
- other based on programmable logic

EXPANSION CARDS

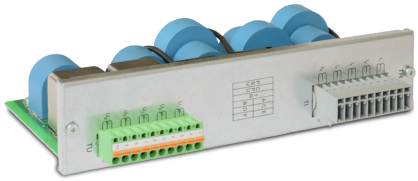
PRIMARY CARDS
- power supply or power supply with reinforced contacts (connection ability up to 10 A DC)
- processor

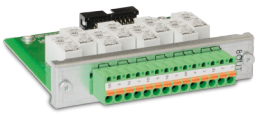
MEASURING CARDS
- standard (5I+4U)
- synchrocheck (4I+5U)

FUNCTION CARDS
- 8 binary inputs
- 12 binary inputs
- 8 relay outputs
- 4 relay outputs with reinforced contacts (connection ability up to 10 A DC)

ANALOGUE CARDS
- 4 analogue inputs 0-10 V
- 4 analogue inputs 4-20 mA
- 4 analogue outputs 0-10 V
- 4 analogue outputs 4-20 mA

TEMPERATURE CARDS
- 6 temperature inputs PT100
- 6 temperature inputs PT1000





PORTS AND COMMUNICATION PROTOCOLS

- Ethernet
- Single-mode optical fibre - OPTOSM
- Multi-mode optical fibre - OPTOMM
- Plastic optical fibre - OPTOP
- RS485
- CANbus 2×
- USB 2.0
- WiFi*

- Modbus RTU/TCP
- IEC 60870-5-103
- DNP 3.0
- Profibus
- CANbus/PPM 2
- IEC 61850

* after agreement with the manufacturer

RECORDERS

- event recorder, 1000 events
- interference recorder up to 160 s sampling frequency 1.6 - 3.2 kHz
- criterion recorder for TRR 250 ms
- recording of instantaneous values, TrueRMS
- phasor

TECHNICAL PARAMETERS

Power supply with auxiliary voltage	
DC voltage AC voltage Option	110 V, 220 V (80-300 V DC) 230 V (88-265 V AC) 24-48 V (19-58 V AC/DC)
Max. power consumption (panel and unit)	30 W (VA)
Current measurement circuits	
Rated current	1 A or 5 A
Rated frequency	50 Hz
Phase current measurement range	0.05-150 A
I0 current measurement range	0.1-100 A
Voltage measurement circuits	
Rated voltage	57,7/100 V
Rated frequency	50 Hz
Voltage measurement range	3-120 V
Measurement accuracy	
I1, I2, I3 (0.1-150A)	1%
U1, U2, U3, U0 (5-120V)	1%
I0 (0.1-100A)	1%
P, Q, EC, EB (U>5V, 0.1A<I<10A)	1%
f (U>5V)	10 mHz
φ 1, φ2, φ3, φ0 (U>5V, 0.1A<I<10A)	1°
Protections parameters	
Overcurrent protections operate time	typically 35 ms
Line differential protection operate time	typically 20 ms
Reset ratio of overload protections	Configurable
Reset ratio of underload protections	Configurable
Parameters of W1, W2, W3 binary outputs (breaker control)	
Voltage on open contacts	250 V AC, 440 V DC
Circuit activation at 220 VDC	5.0 A
Circuit deactivation at 220 VDC (L/R = 40 ms)	0.3 A 5 A (for PSUHI card)
Circuit deactivation at 220 VAC (cos φ = 0.4)	2.0 A
Parameters of binary outputs (other)	
Voltage on open contacts	250 V AC, 440 V DC
Permanent load	5.0 A
Circuit deactivation at 220 VDC (L/R = 40 ms)	0.1 A 5 A (for OUTHI card)
Circuit deactivation at 220 VAC (cos φ = 0.4)	2.0 A
Parameters of binary inputs	
Rated voltage Optional Other on request	110/230 V AC/DC 24-48 V (19-58 V AC/DC)
Maximum current consumption at 220 V DC; 230 V AC	2 mA; 15 mA
Environmental conditions	
Operating temperature	-10°C to +55°C
Storage temperature	-25°C to +70°C
Relative humidity	5% to 95%, without water vapour condensation
Vibrations and mechanical impacts	Class 1 acc. to IEC 60255-21
Electromagnetic interferences	Class B acc. to IEC 60255-26
Safety	
Insulation electric strength	2 kV/50 Hz/60 s acc. to IEC 60255-27
Dimensions	
Weight (central unit/operator panel)	5 kg/1 kg
Central unit dimensions (WxDxH mm)	222x103x187/234/281
Central unit protection class	IP 3X/IP 4X (option)
Panel protection class (front plate side)	IP 4X/IP 54 (option)

e²TANGO-STUDIO SOFTWARE

The e²TANGO-Studio is an engineering program dedicated to the e²TANGO bay controller and, at the same time, a configuration tool for the panel. The programme has been developed and equipped with a rich set of functionalities, which, combined with a clear visual configuration of widgets, becomes excellent support in everyday work, enabling the creation of projects for many devices, panels, switchboards, or stations.

advanced designing

possibility of preparing the devices' configuration for the whole switchboard on the PC and its distribution using USB

user elements

defining customised graphic elements of the synoptic diagram

quick configuration assistant

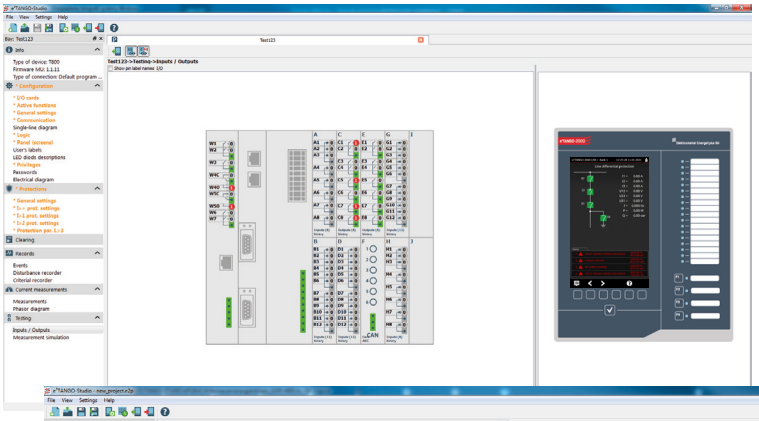
facilitating the first use of the programme and support during regular work

on-line preview

live preview of I/O statuses, measurements; real preview of the image displayed on the LCD screen

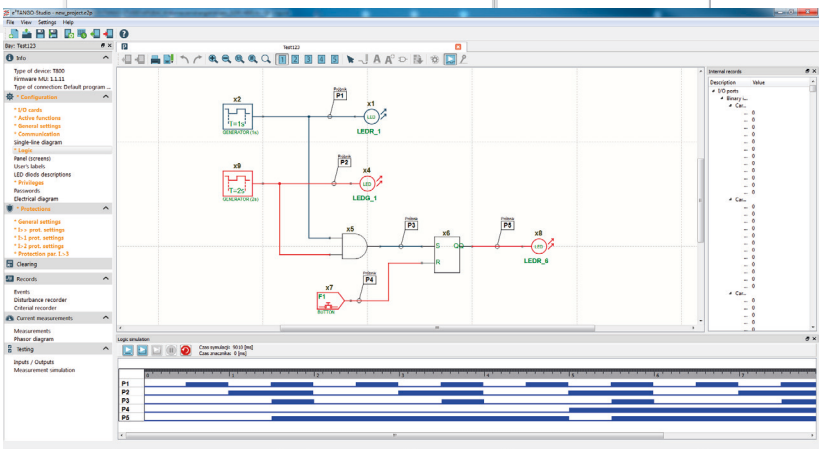
displaying compliance

preview of the actual view of the panel screen



possible further expansion

using plug-ins



visual characteristics' shaping

graphical and standard configuration of protections' settings

prosta weryfikacja nastaw i selektywności

presentation of the whole overcurrent protections' family presentation on one chart

full statuses' view

access to all internal statuses of the device and protections

instant user screen designing

placement of elements supported by drag&drop method

logic simulator

possibility of full simulation of logic without connecting to the device

logic legibility

possibility of dividing the logic into blocks and sheets

operation of extended logical dependencies

up to 340 logical gates/functors

ADVANCED LOGIC EDITOR AND SIMULATOR

The e²TANGO-Studio features an advanced and extended logic editor that allows for simulating the logic circuit, also visible from the panel, without connecting the device. It allows previewing logical statuses while working with the device, which facilitates project preparation, as well as commissioning and servicing of switching stations. It gives the possibility to design non-standard logics dedicated to the requirements of the client's infrastructure.

STANDARISATION

PN-EN 60255-1	Measuring relays and protection equipment. Part 1: Common requirements
PN-EN 60255-26	Measuring relays and protection equipment. Part 26: Electromagnetic compatibility requirements
PN-EN 60255-27	Measuring relays and protection equipment. Part 27: Product safety requirements

INSTRUCTIONS FOR FILLING IN THE FORM

STEP 1

The presented table includes basic technical parameters of the e²TANGO-2000 protections. Only 1 item should be selected from each item numbered from 1 to 10. If "other" is selected, enter the ordered value in the corresponding field in STEP 3.

Explanation for step 1.

- ☐ - recommended basic configuration
- OPTOMM - multi-mode fibre optic
- N1 - surface installation ver. 1
- N2 - surface installation ver. 2
- N3 - surface installation ver. 3

STEP 2

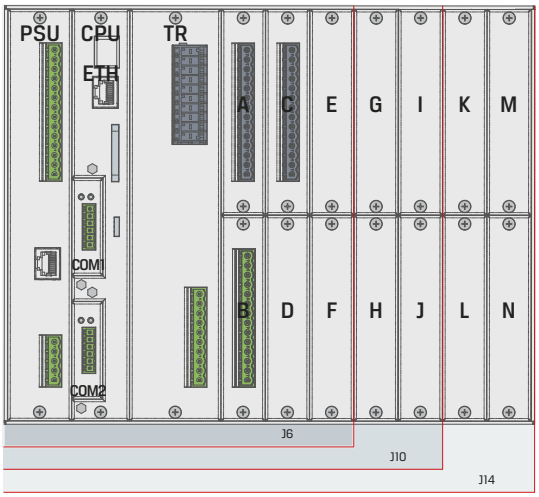
The presented table includes a list of available expansion cards and possible places for their installation in the e²TANGO-2000 HV protection central unit. No tick box ☐ means that the given card cannot be installed in a given place. Select the cards to be ordered from the list and mark with the "X" slot in which they are to be installed. The cards' distribution should start with the A slot. The unit capacities are marked with a background colour in the table, respectively.

Describe additional requirements in the designated area.

Explanation for step 2.

- ☐ - recommended basic configuration
- maximum 4 8OUT cards
- maximum 1 AI10 card or 1 AI20 card
- maximum 1 AO10 card or 1 AO20 card
- maximum 1 PT1 card or 1 PT10 card

View of the central unit with a selection of the slot arrangement for expansion cards



STEP 3

The above-selected parameters of the e²TANGO bay controller should be completed in appropriate fields. The e²TANGO code created in such a way together with other requirements or a scanned page of the form should be sent with the order to: eaz@elektrometal-energetyka.pl

Example of the e²TANGO-2000 HV protection unit configuration:

① e²TANGO-2000-LRR	⑧ mixed installation
② J10 central unit	⑨ 8 m cable
③ TRS measuring card	⑩ protection class IPX4
④ rated current of the measuring card 5 A	⑪ IEC 61850 communication (electric)
⑤ universal binary inputs voltage	[A] slot A: card 8IN
⑥ RS485	[B] slot B: card 8OUT
⑦ OPTOSM	[C] slot C: card 12IN

Example of correct code completion:

e²TANGO	2000-LRR	J10	TRS	5A	UNI	RS485	OPTOSM	M	8	IP4X	E

8IN	8OUT	12IN
